

**Box 1: Implications for future policy and practice**

The study findings suggest a need for:	
	<ul style="list-style-type: none"> <li>• A clear strategic vision and leadership to ensure the success of the integrated model</li> </ul>
	<ul style="list-style-type: none"> <li>• Recognition of the challenges of implementing transformational public health services and promoting collaboration in hostile economic conditions</li> </ul>
	<ul style="list-style-type: none"> <li>• Clarity about the aims and intended outcomes of commissioning an integrated lifestyle service in the context of a need to tackle health inequalities</li> </ul>
	<ul style="list-style-type: none"> <li>• Drawing on learning from existing research and practice with targeted groups</li> </ul>
	<ul style="list-style-type: none"> <li>• Investing time and resources in supporting change management processes with new and existing staff, to build coherence, ensure buy-in, shared values, feasibility and complementarity between all elements, and enhance 'fit' with existing services</li> </ul>
	<ul style="list-style-type: none"> <li>• A workforce that is sufficiently trained to implement an integrated service effectively and ensure the transition to new staffing roles and structures is managed appropriately</li> </ul>
	<ul style="list-style-type: none"> <li>• Sufficient time built into the mobilisation and set-up time of the new service, especially across provider organisations, to ensure teams are working towards a shared vision</li> </ul>
	<ul style="list-style-type: none"> <li>• Appreciation of the complexities of multiple providers delivering an integrated service, and commissioning and provider responsibilities being managed in the same organisation</li> </ul>
	<ul style="list-style-type: none"> <li>• Use of meaningful, co-produced and robust performance management systems linked to a shared understanding of what the service is aiming to achieve and what success looks like</li> </ul>
	<ul style="list-style-type: none"> <li>• Shared performance indicators across providers to ensure fully integrated working, and quality assurance measures to ensure the outcomes of the model can easily be reviewed as a whole</li> </ul>
	<ul style="list-style-type: none"> <li>• Identification of effective tools to capture change over time and measure outcomes valued by communities themselves (e.g. gaining a sense of belonging, expanding social networks, building self-belief, etc)</li> </ul>

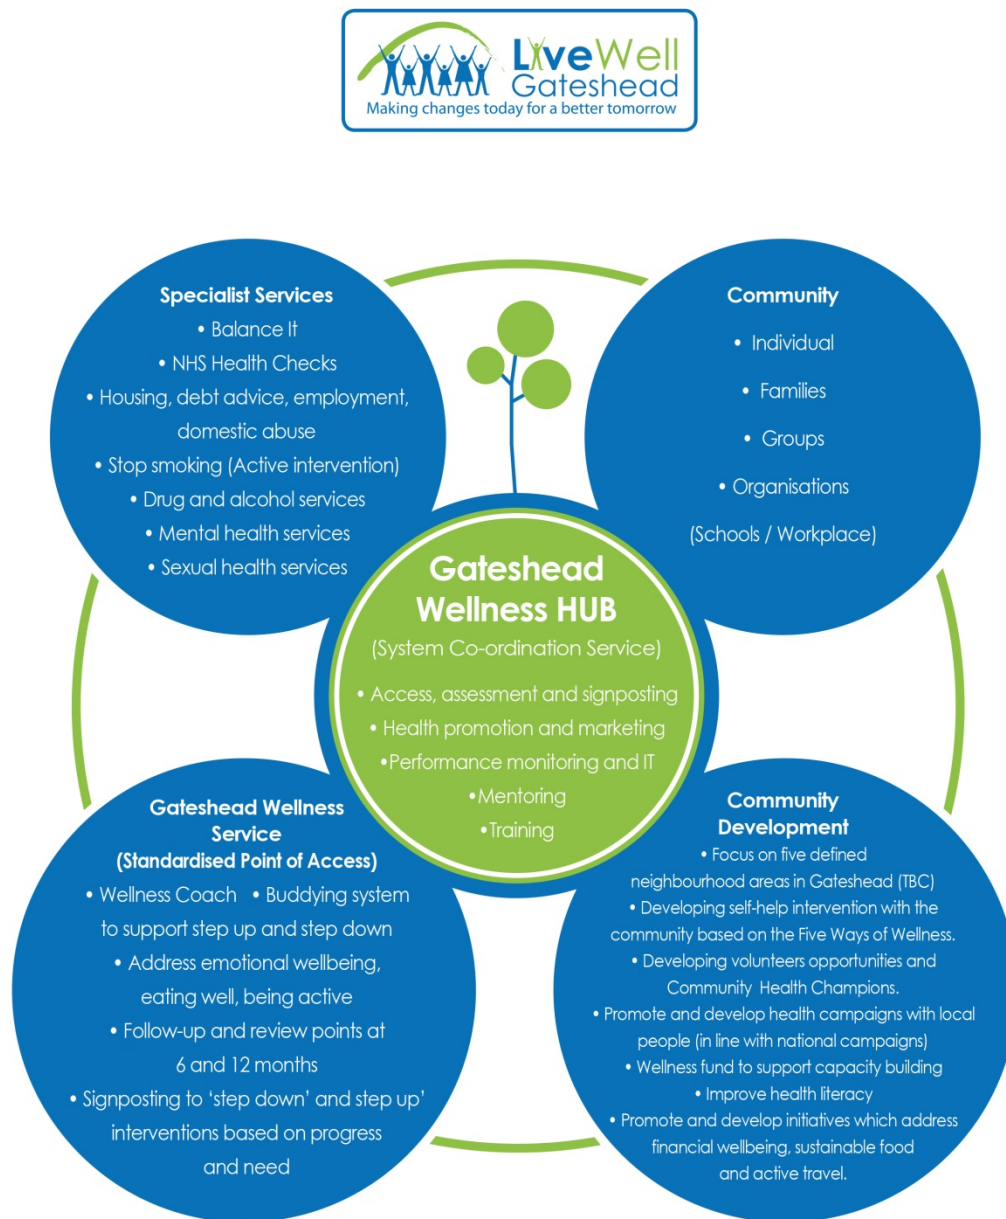

Figure 2: Overview of the WFL service model

**Highlights for Public Health:**

- Single-issue lifestyle services have made little impact on health inequalities
- Evidence is limited on the practicalities of developing, commissioning and implementing integrated services which address multiple health and wellbeing issues simultaneously
- Adverse structural and contextual factors risk destabilising these fledgling services
- Progress has been undermined by ongoing austerity and cuts to public health budgets
- Commissioners require robust, timely evidence of impact that takes into account the particular needs of the target communities
